X Open Hub will automatically move (rollover) your open positions for commodities and indices to the next liquid contract before the current contract expires. This table shows the dates when rollovers can occur. Please note that this information is for guidance purposes only and is subject to change due to low liquidity or unforeseen changes applied by the exchanges.

The change in position value associated with a change in basis will be adjusted by swap points on the basis value. Clients with limit and stop orders close to the current price are asked to adjust their position to changes in basis value. Otherwise, stop and limit orders will be executed according to the standard procedure. Please note that a position close may be executed if a rollover is applied.
